PROFESSIONAL SUMMARY

Software and AI Engineer with 8+ years of software engineering experience building scalable distributed systems, microservices, and full-stack applications using React, Node.js, TypeScript, and cloud technologies. Hands-on experience running local large language models (LLMs) for coding and developing a coding agent powered by local models. Personal AI projects include building AI workstations and an Electron desktop application that integrates locally running models for image, video, and code generation. Combines enterprise software development experience with practical AI application development and local model integration.

Experienced in using Claude Code, including its skills and plugins, to accelerate development workflows and improve productivity.

AWARDS & RECOGNITION

- **Extra Mile Award – Emerson:** Recognized as Best Performer for exceptional contributions to product development
- **Outstanding Skills Award – Emirates NBD:** Awarded for excellence in LEAP IDE development
- **Outstanding Contribution Award – Emirates NBD:** Recognized for contributions towards DX Engineering Practices 2026

KEY ACHIEVEMENTS

- **Auto Replenishment System (FirstCry.com):** Engineered predictive ordering system analyzing sales patterns and inventory levels across 500+ franchise stores, automating procurement that processes *Rs.60-90 Lakh* (\$75K-\$110K) in daily orders, generating *Rs.2-3 Crore* (\$250K-\$370K) monthly revenue and eliminating manual ordering overhead
- **Multi-Tenant Architecture Optimization (Emerson):** Redesigned backend architecture for RTM system, improving query performance by 50% and enabling seamless data isolation for 100+ enterprise clients
- **Real-Time Healthcare Platform (SPAK Engineering):** Built Telemed platform handling 10,000+ concurrent WebSocket connections for live doctor-patient consultations with HLS video streaming
- **IoT Innovation (FirstCry.com):** Developed and deployed IoT-based customer feedback system using Node.js and Arduino across 200+ retail locations, capturing real-time customer sentiment data

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML/CSS

Frontend: React.js, Next.js, Redux, Redux-Saga, Zustand, MobX, Angular, Electron, Tailwind CSS, AntD, MUI

Backend: Node.js, NestJS, Express.js, Restify, GraphQL, Microservices, RESTful APIs, WebSockets, Kafka

Databases: MongoDB, PostgreSQL, MySQL, MSSQL, DynamoDB, ElasticSearch

Cloud & DevOps: AWS (EC2, S3, Lambda, DynamoDB), Docker, CI/CD, Multi-tenant Architecture

Tools & Frameworks: Kafka, Git, GitHub Copilot, Claude Code, Socket.io, Redux-Toolkit, Arduino/IoT, Jira, Notion, Confluence

PROFESSIONAL EXPERIENCE

Software Engineer

Emirates NBD

May 2025 – Present

Dubai, UAE

- Architected and developed RESTful microservices using Node.js, TypeScript, and Express.js for ENBD X insurance platform, enabling mobile users to purchase insurance products seamlessly

- Built Wealth Connect Corporate Actions web application from scratch using React.js, Node.js, and MongoDB, empowering wealth advisors to manage client portfolios, send bulk notifications, and handle consents
- Leveraged GitHub Copilot in agentic mode to accelerate development cycles by 40%, implementing best practices for scalable, maintainable code architecture
- Designed MongoDB schemas optimized for high-throughput operations, ensuring sub-100ms API response times

Senior Software Engineer

April 2022 – May 2025

Emerson Automation Solutions

Pune, India

- Developed ValveLink Pro frontend using React.js, Redux-Saga, and WebSockets, enabling real-time communication with industrial valve devices and reducing latency by 35%
- Redesigned backend architecture for RTM Tank Monitoring system, implementing GraphQL APIs and optimizing multi-tenant data isolation, improving query performance by 50%
- Led code reviews and established architectural patterns for scalable, multi-tenant SaaS applications serving 100+ enterprise clients
- Integrated real-time monitoring dashboards using Next.js and MSSQL, providing actionable insights for industrial operations

Full Stack Developer

June 2020 – March 2022

SPAK Engineering

Bangalore, India

- Built Telemed healthcare platform using React, Node.js, and WebSockets, facilitating real-time doctor-patient consultations with HLS video streaming and live chat for chronic disease management
- Architected and developed RE Instrument Monitoring System as hybrid Electron app, deployed on AWS (EC2, S3, DynamoDB) with offline-first capabilities for field engineers
- Designed RESTful and WebSocket APIs handling 10,000+ concurrent connections, ensuring HIPAA-compliant data handling

MEAN Stack Developer

November 2017 – June 2020

FirstCry.com (BrainBees Solutions Pvt. Ltd.)

Pune, India

- Developed B2B e-commerce platform using Angular, Node.js (Restify), and PostgreSQL, processing \$50M+ in annual transactions for 500+ franchise partners
- Engineered Auto Replenishment System using machine learning algorithms to predict inventory needs, reducing stockouts by 30% and optimizing supply chain efficiency
- Built IoT-based Feedback Kiosk using Node.js and Arduino (ESP32), deployed across 200+ retail locations to capture real-time customer sentiment
- Implemented AWS infrastructure (EC2, S3, Lambda, Elasticsearch) supporting 1M+ daily active users with 99.9% uptime

EDUCATION

Bachelor of Engineering (Computer Science)

2014 – 2017

Shivaji University

Miraj, India

Diploma

2011 – 2014

MSBTE

Jaysingpur, India

SSC

2009

Shivaji University

Sangli, India
